The temperature management market consists of sales of products or devices used to control and maintain specific body temperature through external warming or cooling for a specific duration. The temperature management devices are used in operation theatres during surgeries, ICU, blood warming, and in other chronic conditions such as cardiac ailments, neurological disorders, and cancer.

[Global Temperature Management Market Trends](#)

Wearables are evolving at a rapid pace and are expected to be the new trend in the temperature management system market. Heat due to power consumption causes both circuit malfunctions and low-temperature burns to users. Therefore, researchers are proposing thermal management methods using wearable devices with higher performance. A wearable device is a patch that controls the temperature of the patient's body as per the wearer's preference.

[Global Temperature Management Market Segments](#)

By Product: Patient Warming Devices, Patient Cooling Devices
