# ITFirms' Rolls Out Top Performers in Full-Stack Development'22

Here're the reasons why ITFirms' chose these companies for their latest listing round!

UNITED STATES, May 9, 2022 /EINPresswire.com/ -- Full-stack engineers are involved in creating awesome pixel-perfect user interfaces for simple to complex front ends, and databases in the backend. They are hired based on their potential instead of their topic expertise. They have a comprehensive set of technical abilities that scale up with demand. This multi-dimensional job role enables developers to understand all layers of an application and assemble a bit of leadership to ice the cake.

Being a jack of all trades (can't say that they don't master it all), a full stack developer can make prototypes, switch between front and back end development based on requirements, and understand all aspects of new and upcoming technologies.

They can program client-side by JavaScript, jQuery, Angular, Vue, HTML, CSS, Bootstrap, W3.CSS, ES5, HTML DOM, JSON, XML, React, Backbone.js, Ember.js, Redux, Storybook, GraphQL, Meteor.js, Grunt, and Gulp.

They can program server-side with

(authentication, business logic, database management, and synchronizations with the client app) by PHP, ASP, Python, or Node; program a database by SQL, SQLite, MongoDB, C++, C#, Java, Python, Node.js, Express.js, Ruby, REST, Go, Sass, Less, Firebase.com, Parse.com, PaaS (Azure and Heroku).

ITFirms selected a list of top full-stack development companies that have implemented LAMP, LEMP, MEAN, Django, and Ruby on Rails Stacks in their applications:

1. Konstant Infosolutions
2. Falcn Lab
3. Innofied
4. Yalantis
5. Cabot Technology
6. Cleveroad
7. LeewayHertz
8. Datamatics
9. Peerbits
10. Ascendum
