Asaf Rothschild, Global President of ICode foundation said on the occasion, "We believe that the future will require specialized skills for students to thrive in professional life, and ICode is committed to bringing the opportunities to the children to benchmark and assess the learning outcomes for their coding skill".

Following the global trends of amazing response and participation from parents and schools, across 70 countries, ICode Global Hackathon 2021 received more than 2 million + participants in its preliminary selection rounds.

Each level of the Hackathon is designed as a 60-minute, adaptive and gamified coding competition mapped to age-appropriate competencies starting with ages 6 to 16 years. The modules include beginner and advanced levels of Block Coding for primary grade students and

beginner and advanced levels of Python for middle and high school students. The foundation also supports students with comprehensive preparatory support through webinars and practice sessions.

Amit Yadav, Head of Partnerships mentioned that "Coding is new world's English, most of the parents are aware of the importance of coding, but do not know about the platforms to benchmark and certify the skills of their ward. ICode Global Hackathon is a global competition for K12 students to benchmark their learning outcomes against the global cohort of 2million + students."

Last year saw the participation of students from 70 odd countries including China, India, Qatar, the United Arab Emirates, Israel, Singapore, and others The registrations for ICode Global Hackathon 2022 will end on July 31, 2022.
