Rising awareness among people about the cancer treatment and the initiatives undertaken by the government to control the incidence rate is expected to drive the radiology microcatheters market growth.

The most widespread disease currently is cancer, which has led to rise increased the need for rapid treatment. Hence, various programs and initiatives are being undertaken by governments of different countries to control and prevention of cancer, which is anticipated to drive the market.

For instance, the CPCR (Cancer Prevention and Control Research Network) is a national initiative taken for controlling and preventing the burden of cancer across the globe.

Also, the availability of technologically advanced microcatheters is anticipated to increase the adoption of these Microcatheters. For instance, U.S. Food and Drug Administration (FDA) approved the SeQure Microcatheters which is developed to lessen the danger of non-targeted embolization with the help of its fluid barrier technology.

The US and Canada radiology microcatheters market is projected to observe a healthy growth in the market because of the rising government initiatives, presence of well-developed healthcare infrastructure in the countries and rise in awareness campaigns regarding cancer.

Furthermore, rising incidence of cancer and increase in demand for minimally invasive procedures are likely to fuel demand in US. As per the American Cancer Society, the new cases of bladder cancer reported in 2020 in Americans were about 81,400, and around 17,980 patients died because of it in the United States.
