

Self-Made Millionaire Offering Advice to Programmers Looking to Become Entrepreneurs

Programmer and blockchain expert Mahdi Pourzaferani is CEO of FiveM Store

KENTUCKY , UNITED STATES, May 9, 2022 /EINPresswire.com/ -- Mahdi Pourzaferani is a programmer-turned-entrepreneur who turned his experience into a successful company. Currently the CEO of FiveM Store and considered one of the top blockchain advisors, Pourzaferani is now sharing advice to programmers who are interested in becoming entrepreneurs.

Pourzaferani has extensive experience working on the underlying blockchain technology and has leveraged it to become a self-made millionaire. Starting as a freelancer, Pourzaferani, as of 2022, has built up a global clientele based in Morocco, India, the United States, Germany, the Netherlands, Canada and other countries. He has worked with clients from various industries, including finance, healthcare, manufacturing and logistics.

Pourzaferani's deep understanding of blockchain technology has provided his clients with valuable insights and advice that have helped them realize significant efficiency gains and cost savings. His work has earned him a reputation as one of the leading blockchain experts globally, and he is widely respected by his peers. Pourzaferani's success is a testament to his expertise in blockchain technology and his ability to identify and capitalize on opportunities in the market.

In 2008, he began working on security and infiltration projects. Through his dedication, he eventually mastered programming, which was critical in helping him join the programming team at Optic Gaming and EA Sports. Pourzaferani also worked with American video game publisher RockStar. His efforts have stopped hundreds of cyberattacks.

Through his strategic investing, Pourzaferani was a self-made millionaire by the age of 24. He made his fortune by working on projects based on Python Web and JS. After making millions for himself, he began counseling his friends and family to invest in several alternative currencies. He was featured in Fortune UK in June 2021, where he discussed his experience with cryptocurrency investing and how it came to a crashing stop. Despite the unfortunate turn of events, Pourzaferani's story is an inspiring one of self-made success through hard work and determination.

"Everyone, including me, has limited resources and skills," Pourzaferani said. "I focused on software products rather than the business and delegated business and sales to my colleagues to become a successful entrepreneur."

For those considering entrepreneurship, Pourzaferani says it's important for people to do it for the right reasons.

"Just because you don't have a job doesn't mean that entrepreneurship is the right path for you. Before taking the plunge into starting your own business, make sure you have the skills and knowledge necessary to be successful."

Pourzaferni continued, "It's also important to focus on the quality of your product. Even if your sales and marketing efforts are small initially, a few satisfied customers can go a long way in spreading the word about your business. By keeping these things in mind, you'll be setting yourself up for success as an entrepreneur."

He suggests several steps for programmers to become entrepreneurs:

- Find a problem that's exciting to solve
- Research current solutions to the problem
- Develop a strong solution to the problem
- Share the solution with the world
