Global Veterinary Pain Management Market Trends:

The rising domestication of animals is among the key factors driving the veterinary pain management market. Furthermore, the growing consumer awareness towards the availability of opioids, nonsteroidal anti-inflammatory drugs (NSAIDs), laser devices, local anesthetics, etc., to

offer relief from the pain caused by radiotherapy, musculoskeletal disorders, chemotherapy, osteoarthritis, mastitis, etc., is also catalyzing the market growth. In line with this, these solutions are painless, have fewer complications, and do not require sedation when compared to the traditionally used procedures, which, in turn, is acting as another significant growth-inducing factor. Additionally, the increasing adoption of pet insurance services is further augmenting the global market. Besides this, the introduction of numerous technological advancements, including biosensors, non-polymerase chain reaction techniques, immunoassays, etc., for the effective diagnosis of diseases is anticipated to fuel the veterinary pain management market over the forecasted period.
