Stilbene can be referred to either of two stereoisomers of 1,2-diphenylethene: (E)-Stilbene and (Z)-Stilbene. Stilbene is used in the manufacturing of dyes and optical brighteners, and also as a phosphor and a scintillator. The market for optical brighteners is expected to cross USD 2 billion by 2026. Optical brighteners are also known as optical brightening agents, which are chemicals that are mixed with plastics, detergents, papers, and textiles for improved reflectance of blue light. Stilbene optical brighteners dominate the majority of the optical brighteners market as because it emits blue rays and lends an effective brightness to fabrics. The increase in the demand for laundry care products because of the improvement in lifestyle and per capita income of the global population is contributing to the demand for global optical brighteners during the predicted time period. Optical brighteners are non-biodegradable and thus are toxic in nature. Health issues such as allergies to skin and irritation of eyes have a negative impact on the global stilbene optical brightener businesses.
