

New Business Phone App Making Phone Automation Possible--RingPlan

Quite possibly the next evolution in phone technology, phone automation has the potential to change the way businesses use their phones.

SAN DIEGO, CA, USA, May 16, 2022 /EINPresswire.com/ -- A growing Southern California VoIP provider is changing the way people use their phones, adding [business phone automation](#) to their suite of services.

Quite possibly the next evolution in phone technology, phone automation is set to change the way people communicate, according to company President, Jake Hansen.

Fresh off their 2019 release, the new RingPlan [business phone app](#) is already shaking things up; introducing a new phone automation library, available with all enterprise plan subscriptions.

“

It's the first time that advanced automation functionality is made available like this.”

Jake Hansen, President

The new RingPlan Sidecar is a configurable library of functions users can string together to create their own custom automation sequences, tools that can be used to solve a variety of problems.

Users can create up to 48 custom sequences, which can be launched at any time to perform a variety of time-saving tasks, triggered with only the push of a button.

“It's the first time that advanced automation functionality is made available like this.”

Hansen is no stranger to innovation, directly managing his own development team to create and launch this cloud-based phone system in 2019.

Having previously run a phone and internet company, ZTelco, Inc. since 2004, Hansen would use his experience managing customer support to create something beyond his own expectations.

He developed an entire [unified communications platform](#).

More than a phone system, Jake Hansen would come to develop an entire business suite with features comparable to some of the largest providers in America.

In the case of automation, until more is seen on the market, RingPlan Sidecar seems to be beyond compare.

So far, the RingPlan platform has come to include services such as VoIP phone service, video conferencing, business text messaging, and digital fax services, with more reportedly in development.

In the case of automation, Hansen can't wait to see what customers do with the tools he's provided.

Users can create and save sequences using any combination of functions that include dial, pause, transfer, conference, merge, hangup, keypress, hold, and send a message.

"Imagine if you often find yourself performing the same phone tasks, how much time can you save by reducing that down to one button?" asks Hansen.

"Now imagine extending that to your entire team," he concluded.
