The servo motors and drives global market consists of sales of servo motors and drives and related services by entities (organizations, sole traders, and partnerships) that manufacture servo motors and drives. Servo motors or linear or rotary actuators that help enable control of linear and angular acceleration, positioning, and velocity, made in brush and brushless types. Servo drives are also called servo amplifiers; these devices have the ability to take a low power command signal from a motion controller and turn it into high power current/voltage. Servo motors and drives are most commonly utilized in the manufacturing industry for production line robots that help create cars and airplanes that need high repetition yet precise welding, drilling, fastening, sealing, dispensing, and rigid manufacturing.
