The oral thin films market consists of sales of the oral thin films by entities (organizations, sole traders, and partnerships) that refer to a drug delivery dosage system composed of a mono polymeric thin film applied in the mouth, for a quick release of an active pharmaceutical ingredient (API) when placed on the tongue. The purpose of oral thin film (OTF) is to deliver therapeutic substances into the oral cavity or the stomach tract, where they are absorbed and transported directly to the circulatory system. Oral thin-film technologies ensure a fast and sustained release of the active substance, ensuring the ideal dose reaches the correct location within the body.

[Global Oral Thin Films Market Trends](#)

The rapidly growing investment in research and development (R&D) by leading players has propelled the growth of the oral thin film market. Major companies operating in the oral thin films market are focused on investing in research and development of fast dissolving oral thin films to strengthen their position by implementing new platform technologies such as soluleaves, XGEL, and waferTab. R&D helps to innovate new solutions that can be more
