

Find out why orgs need Attack Surface Management, only on the Virtual CISO Podcast

Every org connected to the internet has an attack surface that creates risk. Attack surface management leverages AI & machine learning to answer that question.

HAMILTON, NJ, USA, May 26, 2022 /EINPresswire.com/ -- More security technology isn't

More security technology isn't necessarily better unless it can simplify current workflows and/or yield superior insights that reduce risk."

John Verry, CISO & Managing Partner - Pivot Point Security

necessarily better unless it can simplify current workflows and/or yield superior insights that reduce risk. Attack surface management seeks to deliver both these benefits. To get there, it applies data integration/ingestion and AI and machine learning to automate and enrich what have traditionally been vulnerability management workflows.

To explain what attack surface management is, how it works and why it can be so useful for orgs looking to sort out what's most critical from a staggering mass of data, the latest episode of The Virtual CISO Podcast features

Michelangelo Sidagni, CTO at NopSec and a groundbreaker in this emerging security sector.

Topics discussed include:

- The definition and scope of attack surface management concerning vulnerability management, configuration management, and asset inventory management
- How attack surface management leverages cyber threat and exposure management to help rate vulnerabilities
- The role of configuration scans and environment scans in attack surface management
- How NopSec's solution connects to existing cybersecurity data sources
- How NopSec's solution streamlines cyber compliance

If your business would benefit from spot-on identification of the most critical vulnerabilities in your environment, including analysis of likely attack paths, tune in to this cutting-edge podcast episode with attack surface management thought leader Michelangelo Sidagni.
