The total station market consists of sales of the total station products by entities (organizations, sole traders, and partnerships) that refer to an electronic/optical instrument utilized in modern surveying and building construction. The products utilize electronic transit theodolite in conjunction with an electronic distance meter (EDM) and it is integrated with CPU, an electronic data collector, and a storage system built-in. The instrument is used to determine the object's slanting distance from the instrument, as well as horizontal and vertical angles. This microprocessor unit allows for the computation of acquired data in order to determine the horizontal distance, point coordinates, and decreased level of point.

[Global Total Station Market Trends](#)

New product launches are a key trend gaining popularity in the total station market. The company operating in the total station market are focusing on developing and launching innovative products with advanced technologies to meet the specific technical demand from various end industries across the globe.
