Internet of Medical Things (IoMT) Market Share, Size, Growth, Revenue, Technologies, Top Leaders & Forecast to 2028
Internet of Medical Things (IoMT) Market Share, Size, Growth, Demands, Revenue, Technologies, Top Leaders and Forecast to 2028

NEW YORK, UNITED STATES OF AMERICA, May 26, 2022 /EINPresswire.com/ -- Internet of Medical Things (IoMT) market is expected to gain market growth in the forecast period of 2021 to 2028. Data Bridge Market Research analyses that the market is growing with a CAGR of

Global Internet of Medical Things (IoMT) Market

23.0% in the forecast period of 2021 to 2028 and is expected to reach USD 1,84,592.31 million by 2028. The rise in the demand for real-time healthcare solutions across the globe act as a driver for the Internet of Medical Things (IoMT) software market growth.

Global Iomt market research report is a vital source of information which gives current and approaching technical and financial details of the industry to 2028. All the collected market data is checked and validated by the market experts for the readers and end users. It becomes easy to analyse the actions of key players and its effect on the sales, import, export, revenue and CAGR values with an excellent report. Overview of the market is analysed with respect to market players in the form of customers, businesses or clients. The worldwide A market report also aids in the measurement and optimization of each step in the lifecycle of industrial process including engagement, acquisition, retention, and monetization.

The vigilant efforts accompanied with integrated approaches and sophisticated techniques results into an excellent market research report that drives the decision making process of the business. The business research report reviews diverse markets at a global level in accord with the client's requirements and scoop out the best possible solutions and detailed information about the market trends. Geographical scope of the products is also carried out comprehensively for the major global areas which helps define strategies for the product distribution in those areas. The first class a report is generated with the experience of skilful and

innovative team and not to mention the report is client-centric, leading edge, and trustworthy.

Global Internet of Medical Things (IoMT) market Scenario

According to Data Bridge Market Research, the market for global Internet of Medical Things (IoMT) in North America has the highest market share followed by Europe and Asia-Pacific. Prospectus leader on the market of Internet of Medical Things (IoMT) are Honeywell International Inc. followed by Lenovo Healthcare Information Technology (Lenovo HIT), Hill-Rom Services, Inc., BIOTRONIK, BioSerenity.

In June 2021, Honeywell International Inc. introduced advanced monitoring and incident response (AMIR) service that helps to identify advanced monitoring in the operational technology for a rapid response. The solution provides a scalable, cost-effective, and easy-to-deploy cybersecurity service designed to assist IT and OT security teams.

Internet of medical things (IoMT) is a combined infrastructure of medical devices, software applications, and health systems and services, which is swiftly transforming medical technology's role within health care. Internet of medical things is aiding the health care organizations to streamline their clinical, workflow management and expand their patient care from remote locations.

Global Internet of Medical Things (IoMT) market has developed as a result of technological advancements and increased accessibility to personal healthcare. On the other hand, the absence of infrastructure facilities and trained specialists in the hospital and medical sectors have hampered the market's expansion. A rise in the demand for connected devices in the healthcare sector is expected to create various opportunities for the growth of Global Internet of Medical Things (IoMT) market. This would tend to keep the future of the market strong and advanced.

The Internet of Medical Things (IoMT) market report provides details of market share, new developments, and product pipeline analysis, the impact of domestic and localized market players, analyses opportunities in terms of emerging revenue pockets, changes in market regulations, product approvals, strategic decisions, product launches, geographic expansions, and technological innovations in the market. To understand the analysis and the Internet of Medical Things (IoMT) market scenario contact Data Bridge Market Research for an Analyst Brief, our team will help you create a revenue impact solution to achieve your desired goal.

Key Market Competitors Covered in the Report

Siemens Healthcare GmbH

General Electric
Carre Technologies Inc. (Hexoskin)
Breathometer Inc.
BIOTRONIK
Medtronic
Meru Health
Boston Scientific Corporation
Hill-Rom Services, Inc.
Neurometrix, Inc.
Honeywell International Inc.
VitaConnect
EKso Bionics
BL Healthcare, Inc.
BioSerenity
Koninklijke Philips N.V.
Lenovo Healthcare Information Technology (Lenovo HIT)
AliveCor, Inc.

Scope of the Internet of Medical Things (IoMT) Market

The global internet of medical things (IoMT) market is segmented on the basis of countries into U.S., Canada and Mexico in North America, Brazil, Argentina and Rest of South America as part of South America, Germany, Italy, U.K., France, Spain, Netherlands, Belgium, Switzerland, Turkey, Russia, Rest of Europe in Europe, Japan, China, India, South Korea, Australia, Singapore, Malaysia, Thailand, Indonesia, Philippines, Rest of Asia-Pacific (APAC) in the Asia-Pacific (APAC), Saudi Arabia, U.A.E, South Africa, Egypt, Israel, Rest of Middle East and Africa (MEA)as a part of Middle East and Africa (MEA).

All country based analysis of internet of medical things (IoMT) market is further analysed based on maximum granularity into further segmentation. The market is also segmented on the basis of components into hardware, software, and services. On the basis of platform, Global Internet of Medical Things (IoMT) market is segmented into device management, application management, and cloud management. On the basis of connectivity devices, Global Internet of Medical Things (IoMT) market is segmented into wired and wireless. On the basis of application, Global Internet of Medical Things (IoMT) market is segmented into on-body devices, healthcare providers, home-use medical devices, community, and others. On the basis of end-user, Global Internet of Medical Things (IoMT) market is segmented into hospitals, clinics, research institutes & academics, homecare, and others.

Internet of medical things (IoMT) is a combined infrastructure of medical devices, software applications, and health systems and services that helps to provide patient care from remote locations.

Global Internet of Medical Things (IoMT) Market Scope and Market Size

Global Internet of Medical Things (IoMT) market is segmented based on the component, platform, mode of service delivery, connectivity devices, application, and end-user. The growth among segments helps you analyze niche pockets of growth and strategies to approach the market and determine your core application areas and the difference in your target markets.

On the basis of components, Global Internet of Medical Things (IoMT) market is segmented into hardware, software, and services. Hardware is sub-segmented into processor, sensor, and others. Processors are sub-segmented into Microprocessor (MPU), Application Processor (AP), Microcontroller (MCU), and Digital Signal Processor (DSP). The sensor is sub-segmented into pressure sensor, temperature sensor, blood oxygen sensor, blood glucose sensor, Electrocardiogram (ECG) sensor, humidity sensor, image sensor, motion and position sensor, heart rate sensor, flow sensor, level sensor, and others. Software is sub-segmented into real-time streaming analytics, real-time monitoring, data management, network bandwidth management, security, and others. Data management is sub-segmented into patient data, product data, asset data, and others. Security is sub-segmented into identity access management, secure communications, data encryption and tokenization, distributed denial of service protection, and others. Services sub-segmented into professional services, and managed services. Professional services are sub-segmented into support and maintenance, deployment and integration, and consulting. In 2021, the hardware segment is expected to dominate the market as the increasing adoption of IoT enabled medical devices to meet the growing need for cost-effective and efficient solutions for delivering healthcare services. IoT-enabled medical devices play an important role in data gathering and tracking various activities leading to the development of various IoT in healthcare use cases.

On the basis of platform, Global Internet of Medical Things (IoMT) market is segmented into device management, application management, and cloud management. The device segment is sub-segmented into vital sign monitors, sleep monitoring devices, rehabilitation devices, and others. The vital sign monitor segment is sub-segmented into pulse oximeters, activity monitors, sprimonitor, heart rate monitors, electrocardiographs, blood pressure monitors, and others. The sleep monitoring devices are sub-segmented into wrist actigraphs, sleep trackers, polysomnographs, and others. The rehabilitation devices are sub-segmented into accelerometers, and sensing devices. The network management is sub-segmented into the server, Ethernet switch, and routing, gateway, storage, others. In 2021, the device management segment is expected to dominate the market owing to the advancements of wearable sensor devices, implanted sensor devices, and other stationary devices.

On the basis of mode of service delivery, Global Internet of Medical Things (IoMT) market is

segmented into on-premise and cloud. In 2021, the on-premise segment is expected to dominate the market due to the wide usage of on-premises software as it doesn't require users to have an internet connection to access data. Though most businesses rely on the internet to conduct business, there's always a fear that the loss of a connection could harm productivity and make it impossible to access crucial data.

On the basis of connectivity devices, Global Internet of Medical Things (IoMT) market is segmented into wired and wireless. In 2021, the wired segment is expected to dominate the market as its adoption is increasing due to fewer attacks of network traffic interruptions, and less susceptibility to interference and outages than wireless access points.

On the basis of application, Global Internet of Medical Things (IoMT) market is segmented into on-body devices, healthcare providers, home-use medical devices, community, and others. The on-body devices are sub-segmented into consumer health wearables and clinical-grade wearables. The healthcare providers are sub-segmented into inventory management, personnel management, patient flow management, asset management, and environment monitoring. The home-use medical devices are sub-segmented into telehealth, remote patience monitoring, personal emergency response systems, and others. The community is sub-segmented into a kiosk, point-of-care devices, logistics, mobility services, and emergency response intelligence. In 2021, the on-body devices segment is expected to dominate the market with the surge in esthetic consciousness across the globe and advancements in the field of body contouring.

On the basis of end-user, Global Internet of Medical Things (IoMT) market is segmented into hospitals, clinics, research institutes & academics, homecare, and others. In 2021, the hospitals segment is expected to dominate the market owing to the increasing adoption of electronic health records (EHR) and remote patient monitoring systems.

Global Internet of Medical Things (IoMT) Market Country Level Analysis

The Internet of Medical Things (IoMT) market is analyzed and market size information is provided by the component, platform, mode of service delivery, connectivity devices, application, and end-user as referenced above.

The countries covered in the Internet of Medical Things (IoMT) market report are component, platforms, modes of service delivery, connectivity devices, application, and end-user. U.S., Germany and China dominates the market due to the rising awareness about personal health amongst the population.

The country section of the report also provides individual market impacting factors and changes

in regulation in the market domestically that impact the current and future trends of the market. Data points such as new sales, replacement sales, country demographics, regulatory acts, and import-export tariffs are some of the major pointers used to forecast the market scenario for individual countries. Also, the presence and availability globally can brand and their challenges faced due to large or scarce competition from local and domestic brands, the impact of sales channels are considered while providing forecast analysis of the country data.

Rising Focus on Active Patient Engagement and Patient-Centric Care is boosting the Market Growth of Global Internet of Medical Things (IoMT) Market.

Global Internet of Medical Things (IoMT) market also provides you with a detailed market analysis for every region's growth in the particular market. Additionally, it provides detailed information regarding the market players' strategy and their geographical presence. The data is available for the historical period 2010 to 2019.
