Keratin is a chemical found in glands and internal organs that is necessary for the growth of nails, skin, and hair. It's used to make personal care items as well as to heal wounds, tissues, and other ailments. Keratin products are often used by consumers for personal grooming and maintenance. Keratin products are commonly used as a protective layer on the outside of the skin to control cell proliferation through skin regeneration and softening, maintain flexibility and compactness and decrease wrinkles.

The rise in the demand for hair beauty treatments, skin care creams and for variant applications in medical and drug advancement will drive the keratin market. Other significant factors such as the high disposable income, rising preferences towards improved personal care products and changing lifestyle will accelerate the market growth rate. Furthermore, increasing utilization of keratin products in wound treatments, drug delivery and tissue culture will cushion the market's growth rate.

The keratin market is segmented on the basis of type, product, application, and end-user. The growth amongst these segments will help you analyze meagre growth segments in the industries, and provide the users with valuable market overview and market insights to help them in making strategic decisions for identification of core market applications.

On the basis of type, the keratin market is segmented into alpha-keratin, and beta-keratin.

On the basis of product, the keratin market is bifurcated into natural and synthetic.

On the basis of application, the keratin market is segmented into drug delivery, wound healing, and tissue culture.

On the basis of end-user, the keratin market is segmented into personal care and cosmetics, and others.
