Orthopedic Implants Market Dynamics

Drivers

Increasing cases of orthopedic surgeries

The market is being driven by an increase in the number of orthopedic operations. The need for orthopedic implants is increasing due to the rise in the number of traumas, accidents, and injuries. In addition, bone density issues and middle-age bone diseases are rising. All of these factors are expected to boost the orthopedic market's growth in the next years.

Rise in the number of geriatric population

The orthopedic implants market is predicted to develop due to an increase in the number of geriatric population across the world. According to the WHO, the global population's average age was 37.3 years in 2000 and is expected to rise to 45.5 years by 2050. Patients in their middle years are increasingly choosing for orthopedic implants due to lifestyle-related concerns such as early burnout and lack of exercise. The expansion of the orthopedic implants market is expected to be aided by an increase in mean age over the next few years.

Furthermore, the rising prevalence of orthopedic diseases such as arthritis, osteoarthritis and others will act as a major factor influencing the growth of orthopedic implants market. Along with this, increasing urbanization and rising level of disposable income are the driving factors accelerating the growth of the orthopedic implants market. Also, the rising acceptance of implantable medical devices and increasing expenditure on healthcare infrastructure are the major market drivers that will further escalate the growth of orthopedic implants market. Another significant factor that will cushion the orthopedic implants market's growth rate is the widespread application of orthopedic implants to treat musculoskeletal, orthopedic diseases and injuries.
