Airlines are actively making use of wearable technology to enhance operational efficiency, maintenance, and to provide add-on entertainment to the passengers. Wearable technology includes the use of smartphones, personal electronic devices, smart glasses, smartwatches, near-field communication (NFC), and Bluetooth technology to improve and simplify the passenger experience. According to the chartered air transport market research, these technologies help passengers to improve safety and efficiency, receive updates and information related to their flight. They are capable of helping pilots, crew members, and maintenance teams to monitor gas concentrations, levels of noise, and temperature to avoid mishaps. Smartwatches
