

# Raconteurria launches global collaboration to decentralize manufacturing for all nations

*Missile8964 aims to design scalable and transformable electronics and computers from a Single Board Computer that can be locally manufactured and assembled.*

TAICHUNG, TAIWAN, June 6, 2022 /EINPresswire.com/ -- Missile8964 is a global open source collaboration to design scalable and transformable electronics from modular Single-Board-Computers that can be locally manufactured and assembled via Open-Connection-Architecture.

Open-Connection-Architecture defines the dimensions, coordinates, and connector types only so casings can be designed for different purposes, yet all components are interchangeable for on-the-fly reconfiguration.

All Possible Motherboard Types for Missile8964 to be manufactured locally in every nation.

“

Humanity can finally level the playing field and empower every tellurian. Life can be fair, humanity didn't try hard enough. We never needed a centralized army of assembly workers in a rogue regime.”

*James C. Lin*

recycling.

The first iteration of Missile8964 produces a 3-in-1 device where one SBC can reconfigure into either a smartphone, a tablet, or a laptop as desired.

By standardizing the motherboard size for electronic components, worldwide dispersion of the surface-mounting process is now possible with a minimally staffed local SMT lab setup.

3D printing and simple machining using local materials can produce casing of all kinds, while the OCA standardization make them interchangeable and reusable without

The complete scalable modularization of components allows a plethora of computing and

electronic configurations to be instantly available for most civilian and military applications.

The starter files for Missile8964 are currently available online and will be provided as public knowledge under "Soliloque License" when finalized by 2022-09-01 on the following [GitHub repository for Missile8964](#).

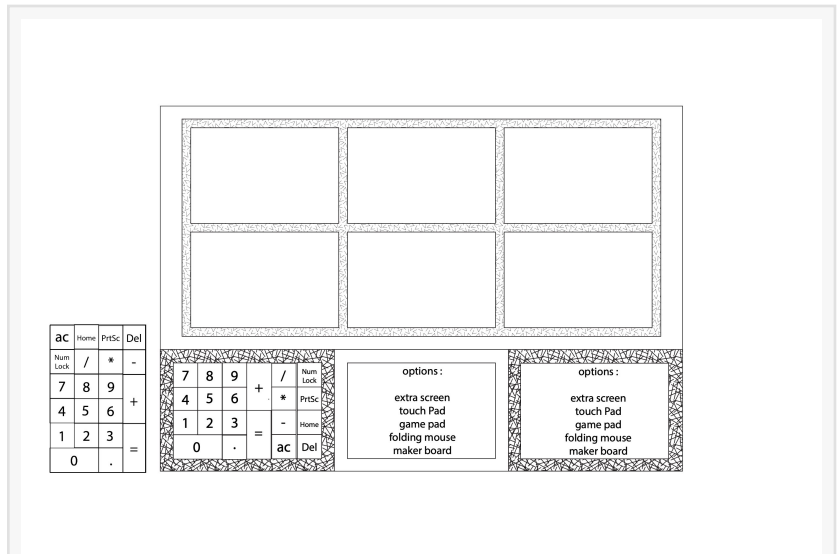

[raconteuria](#) is inviting global talents in industrial design, graphic design, electrical engineering and camera, screen, electric-motor, and single-board-computer makers worldwide to pitch in and audit the results.

Nikola Tesla once said : "A new world must be born, a world that would justify the sacrifices offered by humanity. This new world must be a world in which there shall be no exploitation of the weak by the strong, of the good by the evil; where there will be no humiliation of the poor by the violence of the rich; where the products of intellect, science, and art will serve society for the betterment and beautification of life, and not the individuals for achieving wealth. This new world shall not be a world of the downtrodden and humiliated, but of free men and free nations, equal in dignity and respect."

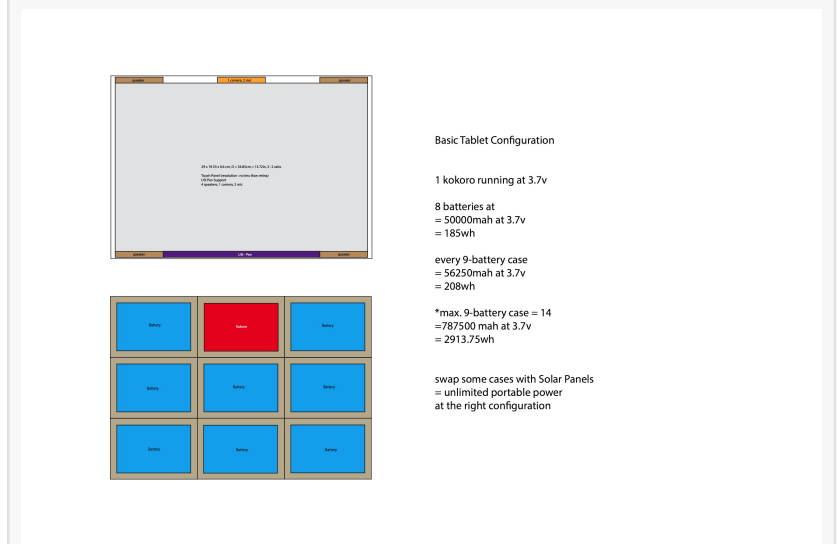

#### Notes to Editors

— "raconteuria-by-claritism" is a goodwill offering to the world in exchange for recognizing the independence of "raconteuria" – the 1st Franchise Oriented Quasi-National Entity, as a sovereign nation, which declared independence on 2021-09-01.

— Author Neal Stephenson defined FOQNE – "Franchise Organized Quasi-National Entity" in his sci-fi novel "Snow Crash". "raconteuria" took advantage of his creation but substitutes Organized with Oriented to allow ourselves with flexibility in the future.

Possible Configuration for Lefties who wishes to customize to their lefthandedness.

Missile8964 configuration as a tablet, with 8 batteries optional and can be replaces with other components.

— “raconteuria” is spelled without a capital “R” to keep the organization levelheaded with our technological purposes and ambition. Visit "raconteuria website" for details about it as a FOQNE.

— The three ultimate goals of raconteuria's constitution “Claritism - remove humanity to rebuild it and repair earth”

- universal equality
- enlightened industrial revolution
- priority earth
