Market Growth & Trends

Obesity has become a global problem as a result of sedentary lifestyles and poor eating habits in recent years. In 2016, approximately 1.9 billion adults over the age of 18 were overweight or obese, with around 650 million children under the age of 5 being overweight or obese. Consequently, the weight loss and obesity management market will largely grow within the forecasted period.

The weight loss and obesity management market includes technologies and medications that are used to help obese or overweight patients lose weight or maintain their weight. Obesity is basically a chronic medical disorder that is generally marked by an abnormal accumulation and storage of fat in the body. The BMI (Body Mass Index) is used to calculate it (BMI). The drugs, nutritional supplements, weight reduction surgery and exercise are some of the ways utilized to treat weight loss and obesity.

The surge in the number of obesity cases among population globally is the most significant factor driving the growth for this market. Moreover, obesity further impacts health in several ways such and increase the risks of chronic diseases (such as hypertension, cardiovascular diseases, osteoarthritis, obstructive sleep apnea, certain types of cancer and depression, high blood pressure, and type 2 diabetes), leading to decline in the life expectancy, which is also expected to accelerate the overall growth of the market.

Key Findings

In October 2020, Meticore has introduced a new weight-loss product for both men and women. The supplement aids in metabolism enhancement by raising the temperature of interior cells, resulting in metabolism regeneration. Six high-quality plant-based nutrients and herbal extracts are combined with Meticore tablets to create the mix.

Post Covid-19 Impact on Weight Loss and Obesity Management Market

The weight loss and obesity management market was largely impacted by the outbreak of COVID-19. The imposition of the lockdown and social distancing restrictions to curb the COVID-19 outbreak, led to supply chain disruptions, stifling business growth, technology event cancellations, suspensions of new developments and has affected the overall production and sales, which harmed the market growth, but with increase in online sales and online programs the market growth was moderate. Moreover, the automation technologies are now being used in industrial operations to reduce employee density. During the epidemic, attention has switched to autonomous materials movement, predictive maintenance using IoT and AI, and automation upgrades in repetitive processes such as assembly lines.

However, around 88% of companies have encouraged their employees to work from home, resulting in a significant decrease in people's physical activity, resulting in weight gain and related problems, which is expected to propel the global weight loss and obesity management market growth over the forecast period. Also, the manufacturers are focusing on various developments and innovations, market trends and other expansion strategies which will accelerate the growth of the market.
