By Route of Administration (Oral, Parenteral, Others)

By End-Users (Hospitals, Specialty Clinics, Homecare, Others)

By Distribution Channel (Hospital Pharmacy, Retail Pharmacy, Online Pharmacy, Others)

## Postpartum Depression Market: Overview

Postpartum depression (PPD) is a type of depression that occurs after a woman has given birth. The individual who gives birth is not the only one who suffers from postpartum depression. It can also have an impact on surrogates and adoptive parents. After having a baby, people go through hormonal, physical, emotional, economical, and social changes. Symptoms of postpartum depression can arise as a result of these changes.

In recent years, the postpartum depression market is anticipated to grow rapidly during the forecast period. Some women have postpartum depression (PPD) after giving birth to a child. Anxiety, changes in sleeping and eating patterns, melancholy, low energy, and irritability are all common symptoms. PPD usually appears within 4 to 6 weeks of having birth, however it can also arise months later. It does not affect all pregnant women, although it is most common between 3 and 6 months following delivering. This could result in psychological symptoms such as a poor mood that lasts more than a week, sobbing, lack motivation, and a sense of inadequacy. Other variables that contribute to PPD include pregnancy-related physical changes, complicated or difficult labor, loneliness, a history of mental health disorders, and hormone changes.

## Postpartum Depression Market: Region-wise Outlook

Depending on geographic regions, the global Postpartum Depression is segmented into seven key regions: North America, Latin America, Eastern Europe, Western Europe, Asia Pacific Excluding Japan, Japan, and Middle East & Africa. North America preserves its leadership

primarily due to a significantly high usage of pharmaceutical preparations as compared to Europe, APEJ and Rest of the World.

To elaborate the studies and estimations involved in this market report, a method of standard market research analysis viz SWOT analysis is put forth. To make better decisions, generate maximum revenue, and enhance business profit, Postpartum Depression market research report is a great key.

### Postpartum Depression Market Dynamics

Rise in the incidences of mood disorders among women: The rising incidences of mood disorders among women is a major factor driving the postpartum depression market's growth rate. After childbirth, the level of hormones in a woman's body fluctuates. The chemical changes caused by the variability in hormone levels lead to mood swings. Constant sleep deprivation is another element that contributes to postpartum depression, however this condition can be cured with adequate rest.

Increasing investment for healthcare infrastructure: Another significant factor influencing the growth rate of postpartum depression market is the rising healthcare expenditure which helps in improving its infrastructure.

Furthermore, rising initiatives by public and private organizations to spread awareness about the will expand the postpartum depression market. Additionally, high alcohol consumption and changing lifestyle of people will result in the expansion of postpartum depression market. Along with this, rising demand for antidepressant medications and talk therapies will enhance the growth rate of the market.
