VisibilityOne Applet+ Delivers Logitech Sync Data to Service Providers

VisibilityOne announced today that its payload delivery solution Applet+ is now available for MSP's looking for Logitech Sync integrations.

LOS ANGELES, CA, USA, June 8, 2022 /EINPresswire.com/ -- VisibilityOne announced today that its payload delivery solution Applet+ is now available for MSPs looking for Logitech Sync integrations. The Applet+ system enables service providers to access the raw payload data and control the way they monitor and manage devices.

> " VisibilityOne delivers a single view of multiple hardware vendors and cloud services. Not toggling between multiple dashboards and complex tools is truly a game-changer for IT. "
>
> *Executive IT Leader at a Fortune 100 Firm*

The VisibilityOne Applet+ introduced at Infocomm 2022 is a non-interface payload data delivery system for Logitech Sync, it combines Sync services in real-time via an encrypted applet and other private API methods into one service provider payload delivery — making it more competitive and far less complex than alternative approaches.

The VisibilityOne Applet+ is sold as a standalone solution, it does not require a traditional VisibilityOne subscription. The Applet+ service will be able to deliver a full feature-rich Logitech Sync experience which includes firmware updates, device status, peripheral status, and more. With Applet+, the service provider decides how to visually present the data and create powerful analytics that will deliver increased value to its customer base.

About VisibilityOne
Today, the VisibilityOne platform supports a wide range of top monitoring capabilities for Microsoft Teams, Zoom, Poly, Cisco, IoT, USB, Bluetooth, and others, including, of course, hybrid worker PC environments.

VisibilityOne is a patented video conferencing monitoring solution that provides real-time performance, self-healing, and health data across multiple vendors and cloud services so that IT teams can see actionable insights into devices, applications, and operating environments. VisibilityOne is the only monitoring application to provide these same insights to remote users of Zoom and Teams. IT teams now have the support they need to proactively monitor their video

meeting solutions, gain critical insights into their UCC, pinpoint issues, and make decisions quickly all in a single, data-rich view.
