Visit Craig Murphy during the presidential birthday celebration to see the authentic 19th century photographic method demonstrated live! Realize what it was like to make a photograph during the United States Civil War and around the world. Have your own "likeness" made that day. Be amazed by the magic of tintypes!

“The images I create are made with the same methods 19th century photographers like Mathew Brady, Alexander Gardner, and others would have used”, says Murphy.

Invented by English artist Frederick Scott Archer in 1851, wet plate collodion photography is the process of pouring collodion onto a plate of thin metal or glass, sensitizing in a silver nitrate solution, exposing in the camera, then developing the plate while it's still wet. Most photographs made between 1850 until the early 1880's were made with the "wet plate" process. There is currently a resurgence of this photographic method. People are amazed to learn about the history and science of these priceless family keepsakes during their portrait session.
