Cultured meat is a type of a lab-grown meat produced using various practices of tissue engineering methods in a culture medium. It is also known as clean meat, in vitro meat and synthetic meat. Production of cultured meat is done by collecting cells from an animal and developing them in an improved and favourable culture medium.

The increasing demand for alternative protein is a major factor accelerating the growth of the market. Furthermore, the rapid technological advancement in cellular agriculture, enhanced food safety and environmental sustainability is driving the growth of cultured meat market. However, the stringent regulatory environment and high set up costs will act as restraints for the cultured meat market for the forecast period of 2022-2029.

Cultured meat refers to meat created using cell culture techniques within a laboratory or manufacturing facility. It is produced by growing master cells collected from cattle, chicken, pigs,

fish, and lamb, as well as other types of livestock and seafood. In addition to meat and seafood production, cultured meat techniques can be used to ethically manufacture other types of animal products, such as leather, as well as animal by products, including lab-grown milk and hen-free egg whites, for example. Cultured meat is ethically produced because livestock is not used within the manufacturing processes beyond collecting the initial cells required for cell culture.
