

LPI Most Innovative Design Award presented to Key Custom Homes of Texas

Lightning Protection Institute recognizes those individuals and firms who provide the highest quality expertise and innovation for lightning protection systems.

LIBERTYVILLE, IL, USA, June 16, 2022 /EINPresswire.com/ -- LPI's Most Innovative Design Award 2022 for a residential property is presented to Kent Key of Key Custom Homes and LPI Members, Heath Howe and Renee Landers of [Bonded Lightning Protection Systems, Ltd](#) of Texas.

Collaboration is essential to the design and implementation of lightning protection systems. Many different disciplines are involved throughout a project to ensure the proper installation and function of a lightning protection system: architects, engineers, building enclosure consultants, facility managers, certified installers and more. The Lightning Protection Institute's Most Innovative Design Awards recognizes LPI Members and an outside individual or firm for their collaboration on the design and installation of a lightning protection system.

“

Early coordination in a project is vital to the proper installation and function of a lightning protection system.”

Tim Harger, LPI Executive Director and LPI-IP Program Manager

The teamwork between Key Custom Homes and Bonded can be seen in the design and installation success with this custom home in Denton, Texas. The unique design of this house created specific areas of installation and limited access that challenged the expertise of both the designers and certified installers. Problem-solving and creativity with Key's Project Manager were critical in determining efficient,

inconspicuous routing/placement of the downloads and cables. [Read more and see more pictures](#) at <https://lightning.org/news/>.
