Cryptocurrency first hit the headlines on October 21, 2008, by Satoshi Nakamoto with the introduction of the Bitcoin blockchain network. The awareness of utilizing a digital currency boomed in which transactions were verified and recorded by a decentralized system. The particular form of transactional currency transformed Bitcoin (BTC), Ethereum (ETC), and Ripple (XRP) into the top three digital currencies; there are more than 4,000 small and big cryptocurrencies in the market.

Cryptocurrencies can be mined or bought from an exchange; however, the profitability varies vastly since a few currencies are challenging to mine in comparison to others. On acquiring the currency, the virtual currency requires a wallet or a digital storage wallet to ensure safety.
