Rising Incidence of Chronic Diseases to Propel Demand

The demand within the global market for infusion pumps has been rising on account of the rising geriatric population across the globe. This trend can be explained by the fact that the elderly people are frequently in need of medications that are often administered intravenously rather than orally.

Furthermore, chronic diseases such as cancer, diabetes, and cardiovascular disorders often render patients weak and unable to eat which also calls for the use of infusion pumps. The administration of drugs, dextrose, plasma, and saline fluids into the body is done through the use of infusion pumps, and this also enhances the growth prospects of the global market.

High Costs of Ambulatory Implantable Devices to Hamper Growth

Ambulatory implantable devices incur heavy expenses, and this has become a major restraint in the growth of the global market for infusion pumps. Furthermore, healthcare sectors across a number of underdeveloped regions are still barred from the usage of infusion systems due to the limitations of the healthcare sector in these regions. Despite these factors that could hamper the growth of the global market for infusion pumps, the demand within this market is expected to keep soaring as better medical reimbursement policies are introduced by the governments.
