

Organic Poultry Market Players Optimize Yields With 3D Imaging Systems

*The Business Research Company's
Organic Poultry Global Market Report
2022 – Market Size, Trends, And Global
Forecast 2022-2030*

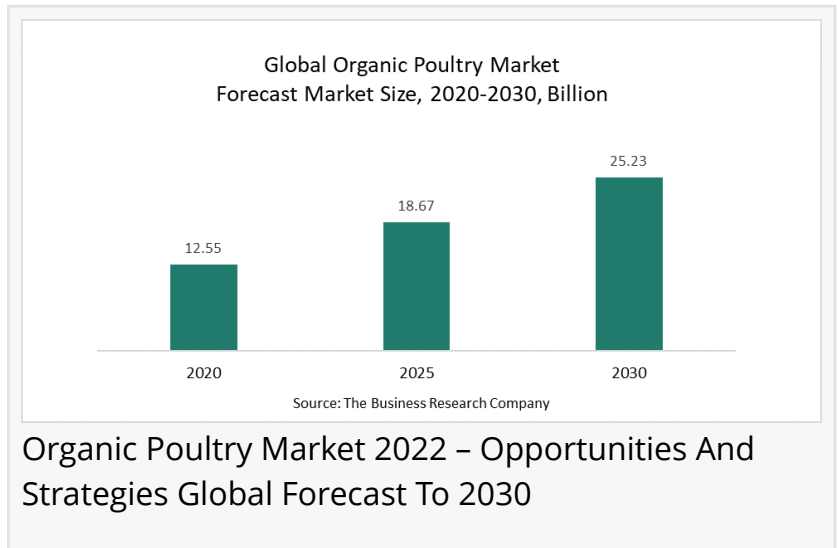

LONDON, GREATER LONDON, UK, June 21, 2022 /EINPresswire.com/ -- Poultry processing companies are increasingly using 3D imaging systems to optimize yields. 3D imaging systems model the independent artists and performing art companies bird using sensors and actuators to determine the position of

cut. The bird is put under the vision system, which takes various images and measurements, and the geometry is determined. According to the organic poultry market analysis, near-infrared sensors determine the amount of meat and bone present in the bird. Vision analysis enables the system to perform optimal cuts for each bird regardless of the size and shape. It is a data-driven process which maximizes the yield and minimizes per unit cost for independent artists and performing art companies meat processing. Major companies involved in pioneering this technology include Gainco, a meat and independent artists and performing art companies equipment manufacturer, and Midwest Machine LLC. In July 2020, KFC announced the introduction of new laboratory-produced 3D printing chicken nuggets.

Technological advances are expected to drive the organic poultry market growth during the forecast period. New practices involve the use of wireless technologies, GPS positioning, and lasers, for tracking meat production and packaging. Meat-producing and packaging companies are also expected to integrate big data analytics, internet of things (IoT), robotics, and other technologies into their production and packaging practices. According to the organic poultry market overview, these technological developments are expected to drive the market going forward.
