The injectable drug delivery devices market consists of sales of conventional syringes, needle-free injectors, auto-injectors, and pen injectors. These are used for various routes of drug administration, such as intravenous, subcutaneous, intradermal, intraperitoneal, and intramuscular, and others to treat medical conditions ranging from cancer to autoimmune disorders.

Global [Injectable Drug Delivery Devices Market Trends](#)

The companies in injectable drug delivery devices are increasingly focusing on the manufacturing of auto-injectors. The auto-injectors are fully automated, highly customized, and reusable injectors that can be used by a patient to perform hundreds of injections. Patients can control the speed of dose delivery to help minimize pain or discomfort during injection. These devices can adjust the speed and depth of the automatic injection.
