

Wood Products Market Players Shift To Biodegradable Chemicals That Have Lower Toxicity Profiles

The Business Research Company's Wood Products Market 2022 - Opportunities And Strategies – Global Forecast To 2030

LONDON, GREATER LONDON, UK, June 23, 2022 /EINPresswire.com/ -- Wood processing companies use chemicals for wood preservation to protect wood from rotting due to microbial agent attack and insects. The companies are using biodegradable chemicals instead of chromated copper arsenate (CCA), which is one of the most widely used woods preservative. Chromium and arsenic are environmental contaminants that are carcinogenic and toxic for global health. Some of the wood preservatives with lower toxicity profiles than the traditional chemicals include ammonium copper quaternary (ACQ), borates, copper azole, copper naphthenate and polymeric betaine.

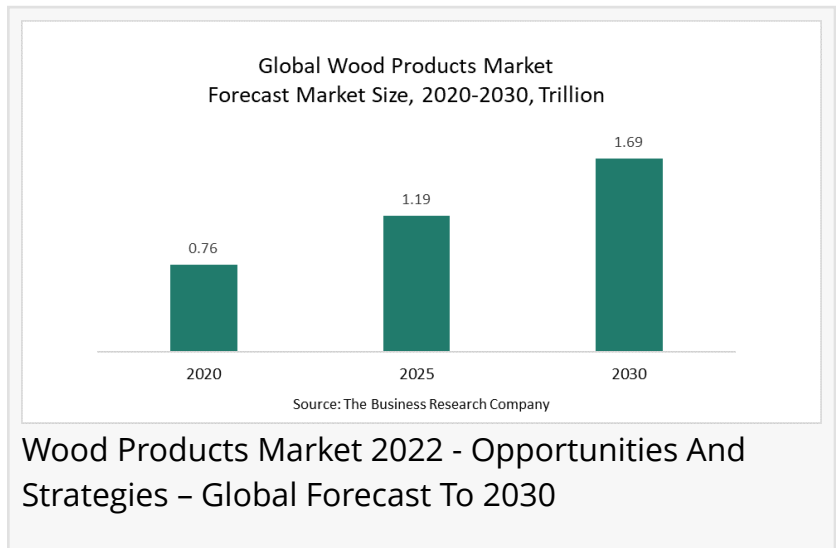

Wood used as a building material is increasing due to numerous advantages of wood buildings over concrete buildings, thus driving the market for wood products. Currently, the building industry is causing 25% of the greenhouse gas emissions globally and therefore the concept of green building construction has evolved which is expected to reduce CO2 emissions and store carbon. In addition, constructing buildings with wood produces less waste and allows quicker construction when compared to a concrete building.
