

# Netgate Releases pfSense Plus Software Version 22.05

*Netgate® today announced availability of its latest version of pfSense® Plus software, Release 22.05, which includes upgrades in performance and usability.*

AUSTIN, TEXAS, UNITED STATES, June 27, 2022 /EINPresswire.com/ -- Netgate® today announced

The speed improvement from OpenVPN DCO and enhanced user experience from UI changes makes the product a compelling solution for business assurance and modern edge networking and cloud needs."

*Jamie Thompson, Netgate CEO*

availability of its latest version of pfSense® Plus software, Release 22.05. pfSense Plus software is a firewall solution capable of delivering edge firewall, router, and VPN functionality to homes, businesses, educational institutions, and government agencies - across every continent. Based on open-source software, pfSense Plus is robust and reliable.

This release offers some significant enhancements, including:

- OpenVPN Data Channel Offload (DCO) - DCO offers serious performance gains by processing encrypted data in

the kernel and reducing the amount of context switching that happens for each packet. To learn more about OpenVPN DCO, read our [blog](#).

- ZFS Boot Environments - This feature makes major changes and upgrades safer by taking snapshots of key filesystem areas, allowing the firewall to be rolled back to an earlier known good state if the user encounters problems with a configuration change, upgrade, or other potentially problematic situation.

- Captive Portal Improvements - These improvements included moving the Captive Portal and Limiters functions from IPFW to PF, removing the need for traffic to be processed by multiple packet filters, and increasing performance when using these features.

- Fixes for UPnP and multiple game systems

- New gateway state killing options for smoother, high availability failover

- Firewall/NAT rule usability improvements such as buttons to toggle multiple rules and copy

rules to other interfaces

"The progress made in this release represents a major advance in performance and usability for customers utilizing pfSense Plus software to secure their networks," said Jamie Thompson, Netgate CEO. "The speed improvement from OpenVPN DCO and enhanced user experience from UI changes makes the product a compelling solution for business assurance and modern edge networking and cloud needs."
