

How Is The Dairy Alternatives Market Impacted By The Improvements In Temperature-Controlled Transport?

The Business Research Company's Dairy Alternatives Market 2022 - Opportunities And Strategies – Global Forecast To 2030

LONDON, GREATER LONDON, UK, June 30, 2022 /EINPresswire.com/ -- The various improvements in temperature-controlled transport is also expected to act as a driver for the dairy alternatives market in the forecast period.

Temperature-controlled transport options give modern businesses the flexibility and confidence to develop global supply chains for temperature-sensitive perishable goods such as dairy alternatives. According to the dairy alternatives market research report, the improvement in cold chains through automation, information tracking, predictive analytics and others allows dairy alternative companies to transport their products across the globe without risk of spoilage or damage, which allows companies to increase geographical footprint and reach more consumers, thus driving the market.

Many companies are coming up with new dairy alternative products which is a key trend shaping the dairy alternatives market outlook. These include making use of a number of plant-based alternatives for the introduction of new and innovative alternatives to milk-based products that are sustainable and healthy. Companies such as Nestle and Take Two Foods are offering innovative products such as non-dairy products made from barley, oats, yellow peas and banana. For instance, in 2020, Take Two Foods, Portland has introduced non-dairy milk products from upcycled spent barley. The new barley milk contains 5 to 8 grams of plant protein and 50% more calcium than dairy milk.
