The vertical farming process can increase productivity because of its ability to grow in artificial lights, with less water and less usage of pesticides. Vertical farming is the practice of producing crops in vertically stacked layers or inclined surfaces with the help of controlled environment agriculture technology. Hydroponics is included in vertical farming which uses 70 percent lesser water than normal agriculture. Vertical farming gives the farming industry the ability to grow crops within urban environments and thus have fresher foods available faster and at low costs.
