The egg market consists of the sale of raw eggs by entities (organizations, sole traders, and partnerships) that produce raw eggs, including poultry farms and other entities which breed, and/or hatch, and/or raise hens and other birds. The market size in this market is valued at farm gate prices. The egg market includes eggs from hens, ducks, geese, quails, and other birds. This market excludes sales of bird meat and processed eggs. This market also excludes the proceeds from the captive (internal) consumption of the eggs for further processing.

Immune modulators are being increasingly used in animal production as they enable producers to move towards antibiotic-free animal agriculture. Immune modulators are a class of drugs that activate or boost an animal's immune system to better control the development of diseases in animals and their transmission to humans. Companies involved in this industry often use antibiotics for growth promotion and therapeutic reasons. However, due to the pressure from consumer groups and rights activists, these companies are turning towards these modulators which protect consumers' health.
