The printing inks market consists of sales of printing inks by entities (organizations, sole traders, or partnerships) that manufacture printing and inkjet inks. Printing inks are liquids that contain pigments or dyes, which are used to produce images, text, and designs. They are widely used in letterpress and lithographic printing. Printing inks consist of a pigment or pigments of the required color mixed with oil or varnish. For example, black ink made from carbon blacks is mixed with thick linseed oil or similar oil, often with rosin oil to which rosin varnish is added. Inkjet inks consist of a base carrier such as water, oil, or a solvent, and colorants such as dyes or pigments and small amounts of chemical additives to provide some unique characteristics.

## [Global Printing Inks Market Trends](#)

The printing inks market witnessed consolidation with a significant number of mergers and acquisitions. Top companies in the printing inks global market are strategically acquiring and merging with start-ups and mid-sized companies to broaden their products and services range or to enter emerging regions.
