

R&C Leading Edge and Cubix Collaborate to Build an NFT Game

WEST PALM BEACH, FLORIDA, UNITED STATES, July 6, 2022 /

EINPresswire.com/ -- The Domino [NFT Game](#), also known as "Domino Earning World," is a decentralized blockchain-based gaming platform that will bring together millions of domino enthusiasts in a community where you can buy, make your own, host games and tournaments at domino centers, with rewards such as real cash prizes, and more.

Players Can Earn Profits: The gaming business as it is today is not at all player-friendly. Significant emphasis in the gaming industry is placed on spending money to play. Earning of games may not always be easy.

One of the central tenets of Domino's user experience is to give players a number of quick and fair methods to make money. You may make real money by engaging in various in-game activities, including playing to earn, purchasing and exchanging NFTs, and competing in tournaments.

Before players take ownership of the tiles in this game, the tiles will be shuffled using controlled RNG (Random Number Generator) technology, which creates a series of numbers or symbols that can only be adequately predicted using random chance.

This algorithm, however, does operate within predetermined boundaries. For instance, it creates a random integer between 0 and 10 or 20 and 60.

RNG is a critical component of many contemporary video games. Randomness prevents things from becoming predictable and ensures interest.

The most incredible method to increase security is to use technology that has been tested and verified alongside best practices. Domino's foundation is composed of tried-and-true methods

and solutions that have been around for a while.

The encrypted seed phrase is safely saved on the user's local storage along with other private information, including addresses, passwords, and account information. Users control their wallets, and no app, website, or online service provider can access any of that secured data.

The Eth-Keyring library from MetaMask is used to store and manage accounts. We use audited and proven open-source solutions to reduce the chances of errors occurring.

Users must verify each device that has access to the account. This boosts security for all participants and makes the game more authentic, thereby, adding to this game's immense prospects.

About [Cubix](#):

With its headquarters in Florida, USA, Cubix serves clients worldwide with innovative digital products that help them reach their goals. Since 2008, Cubix has built tons of mobile games, enterprise-level software, mobile apps, web apps, and websites for businesses across several industries.

About [R&C Leading Edge](#):

R&C Leading Edge is a business with American roots. The phrase "Leading Edge" denotes that the company is at the vanguard, pushing beyond the conventional, and is taken from the initials of the company's founders.

Although "Investing in the Future" refers to our investments in the future, this concept has several dimensions since we are concerned with both the human as well as the technical and virtual components of the future.
