

The Gastrointestinal Drugs Market Profits From Emerging Drug Delivery Methods

The Business Research Company's Gastrointestinal Drugs Market 2022 – Opportunities And Strategies – Global Forecast To 2030

LONDON, GREATER LONDON , UK, July 8, 2022 /EINPresswire.com/ -- The gastrointestinal drugs market is expected to be positively impacted by the new emerging drug delivery methods. Innovative pharmaceutical approaches are being explored to improve regional drug targeting in the GI tract, with the majority still in the infancy stages of translational development. For example, the use of multi particulate dosage systems, such as nanoparticles, has shown promising results in improving gastrointestinal drug delivery compared to single-unit dose formulations. Effective translation will depend on rational dosage form design to enable improvements in gastrointestinal drug delivery for the treatment of both systemic diseases and local gastrointestinal diseases. Along with these advancements, ingestible biosensors that can reside in the body for long periods of time hold the promise of radically transforming drug delivery and clinical treatment and evaluation. Such devices could be used to sense conditions in hard-to-reach places, like the gastrointestinal tract. According to the [gastrointestinal drugs market analysis](#), these new methods are expected to drive the GI drugs market in the forecast period.

The gastrointestinal drugs market size is expected to grow from \$46.68 billion in 2020 to \$62.19 billion in 2025 at a rate of 5.9%. The gastrointestinal drugs market share is then expected to grow at a CAGR of 5.1% from 2025 and reach \$79.87 billion in 2030.

Gastrointestinal drugs market trends include manufacturers using floating drug delivery systems for the treatment of local infections related to the gastrointestinal tract. The bilayer floating tablet is the core component of the floating drug delivery system (FDDS), which is used to extend

the gastric residence time in the stomach. It's best for treating local infections including peptic ulcers, gastritis, Zollinger-Ellison syndrome, indigestion, and other gastrointestinal tract infections, but it can also be used for systemic infections. Drugs that are acid labile and have a short half-life benefited from FDDS protection. It also increases drug bioavailability, decreases drug waste, and extends drug residence duration. Various technologies are now being employed in the development of FDDS.

Major players covered in the global gastrointestinal drugs industry are Takeda Pharmaceuticals, Bayer AG, Abbott Laboratories, Otsuka Holdings Co Ltd, Johnson & Johnson, Reckitt Benckiser Group plc, Bausch Health Companies Inc., Sanofi S.A, Procter & Gamble and Daiichi Sankyo Company.
