The general crop farming market consists of sales of general crop farming products by entities (organizations, sole traders, and partnerships) that produce general crops, hay and grass seeds, tobacco, cotton, shelled groundnuts, sugarcane, sugar beet, fiber crops, tea, coffee, rubber, and other general crops. This market excludes processed general crops such as smoking tobacco products, refined sugar, and other processed general crop products. This market also excludes the proceeds from captive (internal) consumption of the general crops for further processing.

Implementing microbe-enhanced seeds, boost crop production and increases profitability with its ability to produce crops in drought conditions. The microbes function similarly to beneficial bacteria in the human intestine and are found on the surface of the plant and in plant tissue. This treatment for cotton seeds utilizes beneficial microbes that live in plants to produce a cotton plant without genetic modification. The microbe-enhanced cotton, developed by Indigo agriculture is already implemented on 50,000 acres spread across five different states in the
