A Sample of Danziger & De Llano, LLP  
Mesothelioma Compensation Results for People  
Exposed to Talcum Powder that contained  
asbestos Note: These are actual compensation  
results the Danziger De Llano client received  
after attorney's fees.

\*\$6,350,000 Compensation Result received by a  
gentleman diagnosed with mesothelioma at the  
age of 52. He was exposed to asbestos while  
spending four summers working for a local  
ceramics company. He was exposed to  
asbestos-contaminated talc while making slip, a  
clay-like material.

\*\$5,565,000 Compensation Result received by a 71-year-old woman who was diagnosed with  
mesothelioma following her use of baby powder.

\*\$2,025,450 Compensation Result received by a 43-year-old woman diagnosed with peritoneal  
mesothelioma who had exposure to asbestos from her repeated use of talcum powder  
products.

\*\$2,250,000 Compensation Result received by a 35-year-old peritoneal mesothelioma man who  
was exposed to talc products as a baby when his mother used baby powder to diaper him and  
his brother.

\*\$1,625,000 Compensation Result received by a 64-year-old woman who was diagnosed with  
mesothelioma and whose only known exposure to asbestos was from using talc products on  
herself and when diapering her children.

Who are the types of people who may have used talcum powder or baby powder and developed  
mesothelioma?

1. Women who started using Johnson & Johnson's Baby Powder as a young girl, teenager or  
as a young woman and who continued to use this product for years or even decades.
2. Men who started using this product as a boy, teenager or young man and continued to use  
this product for years or decades.

3. Men or women who were amateur or professional athletes who used baby powder to control perspiration or to get a better grip on a football, baseball, basketball, softball, tennis racket or golf club.
4. The typical age for a person with mesothelioma in the United States is about 72 years old. Men or women who have used talcum powder for years and who have now been diagnosed with mesothelioma may be significantly younger. <https://meso.dandell.com>
