The Wi-Fi as a service market consists of sales of WiFi as a service by entities (organizations, sole traders, and partnerships) that refer to a subscription-based service integrating three essential components - software, infrastructure, and managed services. Centralized network administration, real-time visibility, business intelligence choices, customizable captive portals, location services, and reporting are among the features of the software and every piece of hardware and software, including access points, firewalls, and even ISPs when needed is included in infrastructure. WiFi as a service is used to cut expenses, increase security and bring expertise to the external IT team.

Global [Wi-Fi as a Service Market Trends](#)

New technology development is a key trend gaining popularity in the WiFi as a service market. Many companies operating in the WiFi as a service market are developing new products or new technologies to meet the fast-growing demand from end customers and strengthen their business presence. New technology developments including smart WiFi management platforms offering various access points with better integration are focused on increasing the operational
