Ebola, an orphan disease, has affected more than 20,000 people in the African countries as of now. Recurring outbreaks of Ebola in under developed region and lack of effective therapies are factors that drive the need for Ebola drugs and vaccines. The perennial outbreak of Ebola has given rise to a renewed interest among healthcare authorities in finding effective therapies. To control the EVD, the government authorities are supplying funds to pharmaceutical companies for research and development of EVD drugs and vaccines. As an example, the government of the United States, through the FDA, has granted Fast Track designation to the Tekmiras TKM Ebola drug and has funded \$140 million through the Department of defense, United States, for R&D on EVD. According to AMR analyst, Roshan Deshmukh, The prime focus of the companies is to commercialize the drugs and vaccines for EVD disease. The government authorities across the developed regions are extending support for the commercialization of these drugs by providing funds and floating favorable policies.
