Fractionation is a process carried out to separate certain quantity of a mixture. Furthermore, plasma is the fluid component of blood, which is fractionated to obtain different plasma derivatives such as albumin and immunoglobulins. These derived plasma products have therapeutic effects and are employed in the treatment of various blood plasma related disorders.

□□□□□-□□ □□□□□□ □□□□□□□□:

COVID-19 pandemic has affected every industry worldwide. For instance, after COVID-19 was declared as a pandemic by the WHO, countries worldwide adopted nationwide lockdowns to observe social distancing as a measure to contain the spread. This leads to disruption, limitation, challenges, and changes in each sector of every industry. Similarly, the plasma fractionation industry was also impacted by the pandemic. For instance, the outbreak of COVID-19 pandemic

has led to decrease in number of blood donations and plasma collections, which hampers the market growth as it leads to shortage in raw material supply. However, decrease in raw material supply was compensated by fall in demand for plasma derivatives in the starting of nationwide lockdowns, as elective surgical procedures were postponed and availability of treatment for other medical conditions was also hampered. In addition, overall plasma supply in countries is maintained, however, some areas may face shortages. Thus, the viral outbreak had a negative impact on the plasma fractionation market.

The Plasma Fractionation Market report keeps a perfect tab on the market share of several companies, recent market trends, revenue forecast, and new product launches across the market. The report includes company profiles that delineate the revenue share of the top competitors in the market. Simultaneously, the report provides revenue forecasts for four regions and more than twenty major countries across Asia-Pacific, LAMEA, North America, and Europe.

Asia-Pacific presents lucrative opportunities for key players operating in the plasma fractionation market, owing to presence of governmental bodies that regulate and supervise plasma collection, fractionation, and sales is the major factor that boosts the market growth. In addition, surge incidences of medical conditions such as severe fever with thrombocytopenia syndrome (SFTS), hemophilia, and primary & secondary immune deficiencies also fuel the growth of the market.
