The grain farming market consists of sales of grains by entities (organizations, sole traders, and partnerships) that produce grain crops and grain seeds. Grains include wheat, barley, oats, corn, rice, and other grains. These crops are typically grown in open fields and have an annual growth cycle. This market excludes processed grain products such as flour and other products. This market also excludes the proceeds from the captive (internal) consumption of the grains for further processing.

Global [Grain Farming Market Trends](#)

According to the grain farming industry analysis, many chemical companies are offering bio-pesticides to control pests, insects, and weeds in farmlands. Biological organisms are often called antagonists. They include predators, parasitoids, and pathogens. Farmers are using it as an alternative to control pests as they do not cause damage to the crop or plant. Biopesticides are becoming increasingly popular and are safer than traditional chemical pesticides. Biopesticides are derived from natural materials such as animals, plants, bacteria, and certain minerals. When compared to chemical pesticides, biopesticides are inherently less harmful and are more target-specific than chemical pesticides.

Global Grain Farming Market Segments

The global grain farming market is segmented:

By Type: Dry Pea and Bean Farming, Wheat Farming, Others

By Application: Food and Beverages, Fodder, Others
