Many manufacturers are adopting IoT (Internet of Things) technologies to connect equipment and smart devices to obtain real-time insights and identify inefficiencies in the manufacturing process, which is predicted to be a key trend shaping the petrochemicals market outlook. The data obtained is processed, analyzed, and interpreted by plant managers and senior-level management to improve quality and achieve optimum production levels. For example, smart systems give information on the working condition and performance of chemical reactors with embedded software and analytics tools to notify plant operators and managers of possible machine breakdowns.
