

Spex•Crete™ Commercial Underlayments Announces the Release of its Next Generation Lightweight Additive

WESTLAKE, OH, UNITED STATES, July 19, 2022 /EINPresswire.com/ --

[Spex•Crete™ Commercial](#)

Underlayments announced today that it has released its newest product, Spex•Crete [G5](#) Lightweight Additive™.

[Spex•Crete™ G5](#) Lightweight Additive™ is a patent-pending, mineral-based microbead product that is used to decrease the density of self-leveling underlayments. This unique, non-toxic particle provides excellent compressive strengths and workability when added to calcium

aluminate, cementitious and/or gypsum-based products. Spex•Crete™ G5 Lightweight Additive™ incorporates very well into self-leveling products and provides a homogeneous mix that can be pumped, placed and finished with ease. Test results have indicated that surface profile may also show improvement.

“

We are delighted to be able to offer this product to flooring underlayment suppliers and installers that improves their bottom line and benefits the flooring industry as a whole”

Otto Miller - Business Development Manager

Spex•Crete™’s Director and Product Development Manager Doug Gorski conveyed that the G5 Lightweight Additive has been in development for over a year. The primary benefit of the additive is the decreased density of the flooring system that allows for building rehabilitation/restoration

flooring projects that require strict dead-load requirements (the dead load of a structure comprises its cured weight, usually measured in pounds per square foot) before it goes into service.

During the development phase, the product displayed substantial reduced drying time on self-leveling underlayment that allows tile, carpet and other finished flooring products to be installed faster. “Our customers have been asking for a pumpable, lightweight solution that provides high strengths,” said Spex•Crete™’s Business Development Manager Otto Miller. “We are delighted to be able to offer this product to flooring underlayment suppliers and installers that improves their bottom line and benefits the flooring industry as a whole”.

If all goes as planned, the Spex•Crete™ G5 Lightweight Additive is targeted to be available in Q4 2022.
