Hydrogel dressing are used to treat chronic & acute wounds, such as burns & ulcers, and postoperative wounds. These dressings are made of synthetic polymers, usually polyvinyl pyrrolidone and methacrylate. They contain more than 90% of water with glycerine base. Hydrogel dressings provide cooling effect at the site of wound, thereby causing reduction in the pain, wound debridement, granulation re-epithelization, and regulation of exchange of fluids in wounds. Hydrogel dressings provide moist environment for wound healing. The hydrogel dressing products provide solutions to patients suffering from chronic condition by offering them reasonably priced and readily accessible products.

The major factors that boost the growth of the global hydrogel dressing market include rise in adoption of evidence-based treatments for chronic wounds and rapid increase in geriatric population. In addition, hydrogel dressing products promote faster wound healing, and hence are gaining an edge over traditional wound care and closure products, which in turn contributes toward the growth of the market. Moreover, the particularly advantageous in burn injuries as autolytic debridement aids regeneration and reduces the risk of hypertrophic scarring and infection.
