Hemophilia is a rare inherited bleeding disorder that hampers the blood clotting ability of the body due to the lack of factor VIII, the blood-clotting protein. It can lead to serious health ailments, such as headaches, anemia, conjunctivitis, stomach aches, and mononucleosis. Hemophilia can be treated through clot-preserving medications, fibrin sealants, desmopressin, and vaccination. There are different lifestyle modifications that can also help in treating hemophilia, such as regular exercise and usage of protective gear to prevent injuries.
