E-liquid is a fluid-filled in electronic nicotine delivery systems (ENDS), such as vape pens and e-cigarettes, to generate vapor. The battery in these devices provides energy to heat the e-liquid, which turns it into a smooth vapor upon inhalation. E-liquids are available in both nicotine and non-nicotine variants with additional ingredients, such as propylene glycol (PG), water, vegetable glycerin (VG), and flavoring chemicals. These liquids can be formulated with different nicotine levels depending on consumer preferences.

Market Trends:

The rising adoption of e-cigarettes as a safer alternative to smoking is primarily driving the global e-liquid market as they generate less tar and carbon monoxide (CO). Moreover, increasing usage of e-cigarettes by the young demographic is propelling the market growth. Additionally, the availability of new flavors in e-liquids, such as blueberry and menthol, is expanding the acceptability of e-cigarettes amongst non-smokers, which is catalyzing the market growth further.
