The global cholera vaccine market generated \$65 million in 2017, and is projected to reach \$207 million by 2025, growing at a CAGR of 15.6% from 2018 to 2025. The Dukoral segment accounted around half of the total market share in 2017.

Cholera is an acute, profusely watery diarrhea caused by *Vibrio cholera* and spreads through contamination of water and food. In addition, it is closely associated with poor sanitation and lack of clean drinking water. The number of global cholera disease cases accounts for around 35 million every year. Currently, the frequency of cholera epidemics has increased mainly in low- and middle-income countries. Cholera control is the main priority in cholera-endemic areas, which in turn increase the demand for the cholera vaccines.

The cholera vaccine market is expected to exhibit significant growth during the forecast period due to lack of proper sanitation & consumption of contaminated food and growth in awareness about cholera preventive care. In addition, development of novel approaches for new cholera vaccine further drive the market growth. However, risk of adverse effects and the time taken for the regulatory approval is projected to impede the market growth. On the contrary, high growth opportunities in untapped markets are expected to offer significant profitable opportunities for the market players in the near future.
