About AFPA

The AFPA product includes a set of predefined microservices and tools for microservice management, as well as configuration and orchestration infrastructure, and strictly defined interfaces, allowing users to create and program agendas of operation, registration, integration, BI, and automation applications in a very short time.

The product is connected to the Microsoft Active Directory and the MS SQL server is used as a database. The solution

supports the use of corporate branding and is fully integrated into the MS Active Directory, allowing for a single sign-on.
