The use of laundry dryers is highly prevalent in most of the western countries and developed countries. Many

developing countries across the world, however, dry their clothes outside their houses balconies, verandas, and backyards using natural air and sunlight.

However, there is a tremendous rise in pollution lives in such countries and drying clothes outside is harming these clothes by discoloration as well as adhesion of dirt, dust and particulate

matter. There is also the threat of small animals and birds soiling these clothes and can sometimes also cause rips and tears in the clothes. To overcome these problems, many consumers are transitioning over to laundry dryers from traditional air drying. The consumers are becoming aware about the various advantages associated with laundry dryers, which is leading to a greater adoption of such types of dryers.

Players are also trying to improve energy consumption of laundry dryers. Use of repurposed materials in the production of laundry dryer is rising, which is leading to reduction in waste. Such initiatives are likely to sway purchasing decision and likely to provide new growth opportunities for the engaged stakeholders in the laundry dryer industry.

The outbreak of the pandemic has created awareness not only for personal health and hygiene, but for the environment as well. Many companies are now taking efforts in order to be environmentally sustainable and reduce their environmental impact as much as possible. The millennial consumer population is especially concerned with environmental sustainability and conservation and gives preference to products that follow the same principles. Engaged stakeholder in the laundry dryer market are taking efforts to make sure that their production processes are environment friendly.
