InsiteOne To Offer Censinet Third-Party and Enterprise Risk Management Solutions

Unique Platform Integrates Enterprise Risk and Operations Capabilities Across Critical Business Areas for Hospitals and Independently-Owned Radiology Centers

WALLINGFORD, CONNECTICUT, UNITED STATES, July 27, 2022 /EINPresswire.com/ -- InsiteOne LLC, a leading provider of cloud-based enterprise imaging solutions, and Censinet, the leading provider of healthcare vendor risk management solutions, announced that it has executed a solutions partner and reseller agreement. This collaboration enables InsiteOne to deliver Censinet RiskOps™ to its expanding customer base.

> "
> Our partnership with Censinet will give our customers increased productivity and operational effectiveness while eliminating risks to care delivery, data privacy, and patient safety."
> *Dave Cook, CEO InsiteOne*

In addition, InsiteOne is significantly strengthening its customers' third-party risk management by leveraging Censinet's unique Cybersecurity Data Room, where customers can centralize and manage risk questionnaire responses and documentation required by their customer's security assessments, remediations and reassessments.

"Radiology practices manage a complex data environment with many systems and entities where protected health information is transmitted and stored, including RIS, PACS, computer information systems, DICOM, imaging equipment, mobile devices, cloud storage, patient portals, and revenue cycle management systems," said Dave Cook, CEO, InsiteOne. "Our partnership with Censinet will give our customers increased productivity and operational effectiveness while eliminating risks to care delivery, data privacy, and patient safety."

Censinet RiskOps™ enables departments to come together as a single, cohesive team that responds faster and more effectively to risks affecting business operations, care delivery, and patient safety. Business and clinical leaders benefit from efficient procurement processes, effective contracting, fewer post-purchase problems, and elimination of costly duplication and rework.

Risk owners achieve maximum visibility across the lifecycle of processes, suppliers, and products, resulting in better enterprise performance.

"The recent number of significant data breaches and ransomware attacks on radiology centers emphasizes the urgency for better cyber risk management and security controls across all acute and post-acute care facilities," said Ed Gaudet, CEO and Founder of Censinet. "Our partnership with InsiteOne provides its customers with a complete third-party and enterprise risk management solution for hospitals or independently-owned radiology centers."
